

**Proper foot measurement is essential to getting the right fit for your boots.**

If you have any questions, please call so we can go over this with you. (406) 222-3842.

Trace right foot on the back of this page, wearing same sock you will normally wear with the boots. While in a **sitting** position -holding the pen or pencil **straight up and down** - make **one sweep around the foot**. \*\*\*Note additional circles around the foot distort the actual shape. \*\*\* It is much easier to have someone else trace your foot. Use another sheet of paper for your left foot.

Measure the thickest part of your calf; for shot-gunning boots (tucking pants inside boots) measure the calf at thickest part over jeans.

Calf            Right \_\_\_\_\_            Left \_\_\_\_\_

Sit in a comfortable upright position with one knee across the other, and let foot hang freely with no weight on the foot. Again, it is easier for someone else to do these measurements. They can do it without your leg being crossed. Place tape completely around foot as shown in the illustration and do not draw tape tight, just barely snug.

Heel	Right _____	Left _____
High	Right _____	Left _____
Low	Right _____	Left _____
Ball	Right _____	Left _____
